

HADEN HILES

SENIOR SOFTWARE ENGINEER / PRODUCT ENGINEERING / MOBILE & FULL-STACK DEVELOPMENT
ON, Canada | +1 (705) 984-7625 | hi@hadenhiles.com | [LinkedIn: Haden Hiles](#) | github.com/HadenHiles
Portfolio: hire.hadenhiles.com

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience designing, building and operating production mobile applications, web platforms, integrations and cloud-based systems. Proven ability to lead products from discovery and architecture through development, deployment, scaling and long-term support. Combines hands-on expertise in Flutter, Firebase, TypeScript, JavaScript, Node.js, frontend development and DevOps with strong product judgment, commercial awareness and a user-centred approach to software delivery.

TECHNICAL EXPERTISE

Languages and Frameworks: Dart | TypeScript | JavaScript | SQL | Python | PHP | C# | C++ | HTML5 | CSS3 | Sass/SCSS | Flutter | Firebase | React | Vite | Angular | Next.js | Node.js | Express | .NET / ASP.NET | WordPress

Data and Integrations: Cloud Firestore | MySQL | PostgreSQL | MS SQL Server | SQLite | MongoDB | GraphQL | REST APIs | Payment Systems | POS and Business-System Integrations

Cloud and Delivery: Docker | Kubernetes | Linux | Git | GitHub Actions | CI/CD | AWS | Azure | DigitalOcean | DNS | Reverse Proxies | Networking

Engineering and Product: Software Architecture | System Design | Product Discovery | Requirements Analysis | UX/UI Design | Interaction Design | Responsive Design | Accessibility / AODA | Testing | Structured AI-Assisted Development | Agile | Kanban | Estimation | Technical Documentation | Stakeholder Communication

PROFESSIONAL EXPERIENCE

Lead Software & DevOps Engineer | HOW TO HOCKEY | October 2019 – Present

- Own the architecture, development, release management and technical direction of **10,000 Shots**, a production Flutter and Firebase application with more than **80,000 registered accounts** and approximately **2,500 daily active users**.
- Conceptualized and delivered team-based competition functionality that helped **double daily active users** by strengthening social engagement and repeat use.
- Designed and launched the **Challenger Road** guided-training feature and supporting freemium model, tripling subscription conversion; following launch, the app reached approximately **250 downloads and 15 new Pro subscriptions per day**.
- Re-architected fragmented caching and refresh logic into real-time Cloud Firestore data streams, delivering a faster user experience and a more maintainable foundation with only a marginal increase in Firestore costs.
- Built and continue to operate **The Pond**, a WordPress, LearnDash and MemberPress platform generating an estimated **\$25,000 in annual revenue** through subscriptions, digital courses, structured training and member dashboards.
- Introduced CI/CD, automated backups, server snapshots and recovery workflows, standardizing deployment across development, beta and production while strengthening rollback capability during updates and high-traffic launches.
- Migrated suitable microservices from external cloud hosting to local Docker infrastructure, reducing avoidable server costs while maintaining reliable service delivery.
- Built **Next Shift**, a Flutter and Firebase platform that converts feature requests, bug reports and user voting into structured product evidence, supporting clearer roadmap decisions.
- Lead technical discovery, architecture selection and delivery estimation, using rapid mock-ups and MVPs to help non-technical stakeholders validate complex requirements before full development begins.

Independent Software Consultant | BUGSLIFE SOLUTIONS | September 2015 – July 2025 | Freelance

- Delivered approximately **10–15 mobile, web, e-commerce and integration projects** across five to six clients, owning delivery from discovery and requirements analysis through architecture, development, deployment, training and support.
- Designed and delivered the **Group of Seven Trail** Flutter application, combining interactive mapping, Bluetooth beacons and contextual content to provide a location-aware visitor experience supporting trail promotion and future funding propositions.
- Resolved persistent Flutter and cross-platform Bluetooth compatibility issues by repairing an unsupported package, later migrating to a sustainable replacement and restructuring the application architecture before beta launch.

- Built a custom e-commerce platform for **Appliance Shack**, integrating Reaction Commerce with their internal POS system to synchronize inventory and support operational workflows.
- Designed a benefits application service for **Calow Benefits Group** using a Node.js CMS, including spreadsheet-mapping functionality to streamline employee-record imports.

Web Specialist, Marketing | GEORGIAN COLLEGE | September 2018 – September 2019

- Partnered with IT, marketing, content authors and internal departments to resolve complex website, program, course and term-data issues affecting student-facing pages.
- Built and supported website functionality, WordPress workflows and content processes while delivering AODA accessibility improvements.
- Supported integrations and operational tools including Salesforce, Eloqua, Zapier, ResourceSpace and Teamwork.

Programmer & Integration Development Manager | LINKGREEN | August 2017 – December 2017

- Built REST API integrations and a Windows .NET application that enabled non-technical staff to synchronize local inventory databases with cloud platforms across varied customer network environments.
- Managed Kanban delivery, GitHub workflows, releases and CI/CD pipelines, maintaining repeatable integration processes and visibility of delivery risks.

Senior Web Developer | GEEK POWER WEB DESIGN | January 2017 – August 2017

- Led technically complex client projects, delivering custom WordPress solutions and modernizing legacy frontend systems using React, Angular, JavaScript, HTML and CSS/Sass, with a focus on responsive interfaces and usability.
- Refactored outdated codebases into more maintainable solutions and created a Grunt.js build pipeline that standardized JavaScript and CSS animation workflows across the development team.
- Identified gaps between contractual scope and technical requirements, helping prevent delivery issues and misaligned client expectations.

Web Designer & Developer | MEDIA SUITE INC. | June 2014 – September 2015

- Designed and developed more than **50 bespoke client websites**, owning UX/UI design, responsive layouts, visual hierarchy and implementation across HTML, CSS, PHP and MySQL.
- Built custom transactional systems, including a swimming-lesson registration platform with multi-child accounts, scheduling, digital waivers and Stripe payments, alongside a bespoke shopping-cart and checkout solution.

SELECTED PROJECTS

Skill Drills | Flutter, Dart, Firebase

Designed and built a customizable skill-training application that enables users to create reusable routines, define drills with flexible performance metrics, complete structured training sessions and track improvement across different training styles.

FamFlix | Docker, Linux, Cloudflare, Tailscale, Caddy

Designed and operate a self-hosted family media platform spanning containerized services, reverse proxies, private remote access, monitoring and automated content workflows. Resolved networking, DNS, permissions and deployment issues across NAS and Windows systems while defining operational policies and recovery procedures.

Video Scraper | React, TypeScript, Node.js, Express, Docker

Developed a containerized full-stack application using a proxy API, file-streaming workflows and browser automation to process video URLs across varied web environments.

EDUCATION

Advanced Diploma, Computer Programming Analyst | Georgian College | 2020–2021

Diploma, Computer Programming | Georgian College | 2013–2015

PROFESSIONAL DEVELOPMENT

Full Stack Open | University of Helsinki | In Progress, 2026
