Full Stack Product Engineer | Mobile, Web, Integrations, UX & DevOps

Full stack product engineer with 10+ years of experience building production apps, web platforms, integrations, internal tools, client systems, and DevOps workflows. Strongest recent work spans Flutter, Firebase, JavaScript/TypeScript, APIs, CMS platforms, CI/CD, reliability automation, and UX-first product thinking. Known for owning the full path from client discovery and requirements through architecture, implementation, deployment, and long-term support.

SELECTED IMPACT

10,000 Shots app: Principal developer for a production Flutter/Firebase app with 70,000+ users and about 1,500 average daily active users.	Creator and membership systems: Built and supported The Pond using WordPress, LearnDash, MemberPress, payments, gated courses, dashboards, and content progression.
Client and business systems: Owned meetings, requirements, full stack delivery, API integrations, e-commerce, inventory sync, CMS workflows, and training for non-technical clients.	Reliability and DevOps: Implemented CI/CD, backups, snapshots, recovery automation, containerized services, reverse proxy, networking, and documentation.

TECHNICAL STRENGTHS

Languages: Dart, JavaScript, TypeScript, Node.js, Python, PHP, C#, Java, C++, Kotlin, Swift, SQL, SASS/CSS

Frameworks and platforms: Flutter, Firebase, React, Angular, Express, .NET Core, WordPress, LearnDash, MemberPress, PencilBlue CMS, Reaction Commerce

Cloud, data and infrastructure: Cloud Firestore, SQL, MySQL, MS SQL Server, SQLite, MongoDB, GraphQL, AWS, Azure, DigitalOcean, Docker, Kubernetes, Linux, GitHub Actions, CI/CD, DNS, reverse proxy, networking

Product and delivery: UX design, requirements analysis, client discovery, API integrations, data workflows, accessibility, agile, Kanban, stakeholder communication, AI-assisted development

PROFESSIONAL EXPERIENCE

How To Hockey | Lead Software & DevOps Engineer | *October 2019 - Present*

- Principal developer for the 10,000 Shots app, a production Flutter/Firebase app with 70,000+ users and around 1,500 average daily active users.
- Built app workflows for shot logging, stat tracking, team leaderboards, Firebase authentication, real-time data streams, in-app purchases, and release support.
- Improved mobile performance and maintainability by refactoring caching and data refresh logic into cleaner live stream patterns.
- Built and maintained The Pond membership platform using WordPress, LearnDash, MemberPress, payments, gated courses, dashboards, and content progression workflows.
- Built Next Shift, a Flutter/Firebase feedback and voting tool for collecting feature ideas, bug reports, and structured product input from the community.
- Managed CI/CD, system snapshots, backups, recovery automation, DNS, deployment workflows, and technical documentation to improve reliability and rollback confidence.
- Worked across creator operations, user feedback, sponsorship and campaign needs, business workflows, video production, and product decisions for a creator-led media company.

BugsLife Solutions | Principal Developer / Software Engineer / Project Manager | *September 2015 - Present*

- Owned client meetings, discovery, requirements analysis, solution design, estimates, development, deployment, training, and ongoing technical support for small business clients.
- Built a custom e-commerce website for Appliance Shack with API tooling to integrate with their in-house POS system for inventory syncing and business workflows.
- Designed and built a custom benefits application service for Calow Benefits Group using PencilBlue Node.js CMS, including a spreadsheet mapping tool for importing employee records.
- Designed and developed the Group of Seven Trail Flutter app with Bluetooth beacon integration, in-app trail mapping, contextual trail content, and a redesigned WordPress website deployed on DigitalOcean.
- Delivered custom websites, CMS workflows, mobile apps, e-commerce tools, and integrations for clients with limited technical experience, with a focus on clarity and maintainability.

Georgian College | Web Specialist, Marketing | *September 2018 - September 2019*

- Collaborated with IT, marketing, content authors, and other departments to resolve complex website, program, course, and term-data issues affecting student-facing pages.
- Built and supported public website features, WordPress workflows, content management processes, and AODA accessibility improvements.
- Supported operational integrations and tools including Salesforce, Eloqua, Zapier, Resource Space, and Teamwork while communicating clearly with technical and non-technical stakeholders.

LinkGreen | Software Engineer & Integration Development Manager | *August 2017 - December 2017*

- Created and tested REST API endpoints used by B2B clients and maintained supporting integration workflows.
- Built a Windows GUI tool that helped non-technical staff sync local databases with cloud APIs regardless of where customer data lived on their network.
- Managed Kanban boards, GitHub workflows, releases, and CI pipelines while keeping managers and clients up to date on sprint progress.

Geek Power Web Design | Senior Web Developer | *January 2017 - August 2017*

- Built custom WordPress websites, React and Angular interfaces, interactive forms, filters, animations, and other UX improvements from design and contract requirements.
- Served as a go-to developer for complex client projects, mentored colleagues, identified contract gaps, and communicated tradeoffs clearly.

EARLIER EXPERIENCE

- Earlier client work includes PHP/MySQL/Ajax portals, VOIP log analytics scripts, custom CMS websites, Stripe-powered e-commerce templates, registration systems, scheduling workflows, and re-enrollment tools.
- Built websites and product workflows using in-house CMS platforms, WordPress, e-commerce systems, payment APIs, client portals, analytics scripts, and custom business tools.

SELECTED PORTFOLIO PROJECTS

Skill Drills: Flutter app for creating custom skill routines, drill types, flexible success metrics, and progress tracking.	VideoScraper: Vite, React, TypeScript, Node.js, and Express app with a proxy backend for clean CORS handling and simple video URL processing.
Lyric Pilot: Flutter chord and lyric practice app with a custom scroll engine, tempo control, section looping, and separated playback state logic.	FamFlix stack: Docker-based home media platform with reverse proxy, VPN routing, automation, networking, monitoring, and documentation.
Portfolio site: Professional frontend portfolio built to show personality, UX taste, writing clarity, project depth, and real working software.	GitHub footprint: 80+ repositories across Flutter, Firebase, React, TypeScript, Node.js, PHP, WordPress, Docker, automation, infrastructure, and experiments.

EDUCATION

Georgian College | Computer Programmer Analyst, 3-Year Advanced Diploma
